

# The Natural World

All creation is the Lord's, and we are responsible for the ways in which we use and abuse it. Water, air, soil, minerals, energy resources, plants, animal life, and space are to be valued and conserved because they are God's creation and not solely because they are useful to human beings. God has granted us stewardship of creation. We should meet these stewardship duties through acts of loving care and respect. Economic, political, social, and technological developments have increased our human numbers, and lengthened and enriched our lives. However, these developments have led to regional defoliation, dramatic extinction of species, massive human suffering, overpopulation, and misuse and over consumption of natural and nonrenewable resources, particularly by industrialized societies. This continued course of action jeopardizes the natural heritage that God has entrusted to all generations. Therefore, let us recognize the responsibility of the church and its members to place a high priority on changes in economic, political, social, and technological lifestyles to support a more ecologically equitable and sustainable world leading to a higher quality of life for all of God's creation.

**Water, Air, Soil, Minerals, Plants.** We support and encourage social policies that serve to reduce and control the creation of industrial byproducts and waste; facilitate the safe processing and disposal of toxic and nuclear waste and move toward the elimination of both; encourage reduction of municipal waste; provide for appropriate recycling and disposal of municipal waste; and assist the cleanup of polluted air, water, and soil. We call for the preservation of old-growth forests and other plant species. We support measures designed to maintain and restore natural ecosystems. We support policies that develop alternatives to chemicals used for growing, processing, and preserving food, and we strongly urge adequate research into their effects upon God's creation prior to utilization. We urge development of international agreements concerning equitable utilization of the world's resources for human benefit so long as the integrity of the earth is maintained.

**Energy Resources Utilization.** Affirming the inherent value of nonhuman creation, we support and encourage social policies that are directed toward rational and restrained transformation of parts of the nonhuman world into energy for human usage and that de-emphasize or eliminate energy-producing technologies that endanger the health, the safety, and even the existence of the present and future human and non-human creation. Further, we urge wholehearted support of the conservation of energy and responsible development of all energy resource, with special concern for the development of renewable energy sources, that the goodness of the earth may be affirmed.

**Animal life.** We support regulations that protect the life and health of animals, including those ensuring the humane treatment of pets and other domestic animals, animals used in research, and the painless slaughtering of meat animals, fish, and fowl. We encourage the preservation of all animal species including those threatened with extinction.

**Space.** The universe, known and unknown, is the creation of God and is due the respect we are called to give the earth.

**Science and Technology.** We recognize science as a legitimate interpretation of God's natural world. We affirm the validity of the claims of science in describing the natural world, although we preclude science from making authoritative claims about theological issues. We recognize technology as a legitimate use of God's natural world when such use enhances human life and enables all of God's children to develop their God-given creative potential without violating our ethical convictions about the relationship of humanity to the natural world. In acknowledging the important roles of science and technology, however, we also believe that theological understandings of human experience are crucial to a full understanding of the place of humanity in the universe. Science and theology are complementary rather than mutually incompatible. We therefore encourage dialogue between the scientific and the theological communities and seek the kind of participation that will enable humanity to sustain life on earth and, by God's grace, increase the quality of our common lives together.

**Food Safety.** We support policies that protect the food supply and that ensure the public's right to know the content of the foods they are eating. We call for rigorous inspections and controls on the biological safety of all foodstuffs intended for human consumption. We urge independent testing for chemical residues in food, and the removal from the market of food contaminated with potentially hazardous levels of pesticides, herbicides, or fungicides; drug residues from animal antibiotics, steroids, or hormones; contaminants due to pollution that are carried by air, soil, or water from incinerator plants or other industrial operations. We call for clear labeling of all processed or altered foods, with pre-market safety testing required. We oppose weakening the standards for organic foods. We call for policies that encourage and support a gradual transition to sustainable and organic agriculture.
